

The *Configurator* software is a PC based program that is used to program the WL-30 and WL-50B GSM products using a serial cable. It is available as a free download from Watchlink website (see link on the website www.watchlinkgsm.com/support). After download, simply run the program in Windows and then connect a 9-way D type cable from a serial port on PC to the corresponding serial port on the product.

[Configurator program \(free download\)](#)

- *The following are the main features that can be setup in the Configurator program:*
 - Control the outputs as ON/OFF using SMS text messages from a mobile phone
 - Receive SMS text alarms on your mobile phone from digital inputs such as switches and relay contacts
 - Query the status of all inputs and outputs remotely using your mobile phone
 - Define SMS text for all input and output states and output control commands
 - Upload/Download/Print individual configurations and store these configurations on your PC
 - Register up to 5 mobile users for SMS alarms and output control
 - Scheduled download of I/O status to a supervisor mobile number

[Key Features of the Espresso software utility \(free download\)](#)

- Setup of GSM products in various operating modes such as SMS, Command Mode, Voice calls
- Setup of M2M parameters such as TCP/IP connections that use GPRS, 3G communications with servers and the Internet
- Read the GSM module parameters such as signal strength, firmware versions, Service provider and IMEI number
